

Tata SUV Consumer Insights

Business Case & Recommendations

Based on a primary survey of 135 respondents, Hyderabad | Business Analyst portfolio project

1. Problem Statement

Analysis of 135 Tata SUV buyer surveys in Hyderabad surfaced a consistent pattern: service-related information and quality issues are not evenly distributed across the dealer network, and a meaningful share of buyers complete a purchase without full visibility into post-sale support.

- 15.6% of buyers (21 of 135) report having no service information at the time of purchase, and this is entirely concentrated at one dealer (50% of that outlet's buyers).
- Ownership complaints cluster distinctly by dealer – software issues at one outlet, fit-and-finish issues at another – with no overlap between them.
- Younger, EV-leaning buyers (50% EV interest in the 26–35 segment) are not matched by any segment-specific sales approach.

Left unaddressed, these gaps risk uneven customer satisfaction across the dealer network and missed conversion on the highest-EV-intent buyer segment.

2. Stakeholders

Stakeholder	Role in this initiative	Type
Regional Service Head (Tata Motors)	Owns after-sales quality and service KPIs across the dealer network	Sponsor
Dealer Principals (Tejaswi, Select Cars, Venkataramana)	Run day-to-day sales and service at each outlet	Implementer
Sales Advisors	First point of contact; deliver point-of-sale disclosures	Implementer
Customer Experience / CRM Team	Owns post-sale communication and complaint tracking	Implementer
Prospective & Existing Buyers	Receive the information and service experience	Beneficiary

3. KPIs

KPI	Definition	Current (survey)	Target
Service-information disclosure rate	% of buyers who confirm they received service/support info before purchase	84.4% (114/135)	100%
Complaint concentration	Share of complaints held by the single largest theme	27.4% (Software, Tejaswi)	<20% for any one theme
EV consideration among 26–35 buyers	% of 26–35 respondents whose stated powertrain preference is EV	50.0%	Maintain / grow with matching supply
Loan financing dependency	% of buyers financing via loan	74.1%	Track, not reduce – informs lender partnerships
Resale-value awareness	% of buyers who factor resale value into their decision	45.9%	Track by dealer

“Current (survey)” figures describe this 135-respondent sample, not confirmed company-wide service records – treat as a starting baseline to validate.

4. Recommendations – Impact vs. Effort

#	Recommendation	Impact	Effort	Priority
1	Mandatory service-information disclosure checklist at point of sale	High	Low	P1
2	Dealer-level quality review for the leading complaint theme (Select Cars: Fit & Finish / Service; Tejaswi: Software)	High	Medium	P1
3	EV consultative selling script for the 26–35 segment	Medium	Low	P2
4	Financing-partner options tailored to age segment (digital-first under 46, cheque/branch support 46+)	Medium	Medium	P2
5	Dealer complaint-tracking dashboard (extends the Power BI build) for the Regional Service Head	Medium	High	P3

Priority = P1 (do first: high impact, low/medium effort), P2 (do next), P3 (roadmap). Recommendations 1 and 2 are addressed by the user stories in Section 6.

5. Service Journey – Current State vs. Future State

Six stages of the buying and ownership journey, with the pain point this project surfaced at each stage and the corresponding improvement.

Stage	Current state (pain point)	Future state (improvement)
Awareness & Research	Buyers rely on different channels by age (Word of Mouth under 46, Website 46+); no single consistent source of product/service information.	A unified information hub (web + short-form video) is promoted through both channels, so the message is consistent regardless of how a buyer arrives.
Dealer Visit	Each dealer is chosen for a single, different reason (Tejaswi – proximity, Select Cars – test drive availability, Venkataramana – reputation); no dealer currently competes on all three.	Every dealer offers a baseline of proximity convenience, guaranteed test-drive slots, and visible reputation signals (reviews, service ratings).
Consideration & Test Drive	EV interest is high among 26–35 buyers (50%) but advisors have no segment-specific talking points to match.	Advisors use an EV consultative script for high-intent segments, covering range, charging, and total cost of ownership.
Purchase Decision & Financing	74.1% finance through a loan; younger buyers lean digital payment, older buyers lean cheque, with no tailored guidance either way.	Financing options are presented by age-appropriate default (digital-first under 46, assisted/branch options 46+), reducing friction at the final step.
Point of Sale	15.6% of buyers report no service information at the time of purchase – entirely concentrated at one dealer (Select Cars, 50% of its buyers).	A mandatory disclosure checklist is signed off before every sale, closing the information gap identified in this project.
Ownership & Service	Complaints cluster by dealer with no overlap (software at Tejaswi, fit & finish at Venkataramana, a mix at Select Cars), suggesting outlet-specific quality gaps.	Each dealer runs a quarterly quality review against its leading complaint theme, tracked on a shared dashboard visible to the Regional Service Head.

6. User Stories & Acceptance Criteria

Six user stories supporting Recommendations 1 and 2 (the point-of-sale disclosure gap and the dealer-level complaint pattern), written in standard “As a / I want / so that” format with testable acceptance criteria.

US-1 — As a Sales advisor

I want a mandatory checklist confirming I've shared service and support information with the buyer, so that no buyer leaves the dealership without knowing how to get support after purchase.

- AC: The checklist appears as a required step before the sale can be marked complete in the dealer system.
- AC: The checklist captures at minimum: service center location, warranty summary, and how to log a complaint.
- AC: A sale cannot be finalized until the checklist is signed off by the advisor and acknowledged by the buyer.

US-2 — As a Regional Service Head

I want a weekly report of disclosure completion rates by dealer, so that I can identify and follow up with outlets falling behind the 100% target.

- AC: The report shows completion % by dealer, refreshed weekly.
- AC: Any dealer below 90% completion is flagged in a distinct color.
- AC: The report is exportable to Excel/PDF for the monthly review meeting.

US-3 — As a Dealer Principal

I want to see my outlet's complaint themes ranked against the network average, so that I know which issue to prioritize in my next quality review.

- AC: Complaint themes are shown as counts and percentages, both for my outlet and the network.
- AC: The comparison updates automatically as new survey or service-log data is added.
- AC: I can filter by date range to see whether a past fix has reduced a specific complaint theme.

US-4 — As a Sales Advisor

I want a short script and reference sheet for EV questions, so that I can give consistent, confident answers to buyers who show EV interest, especially 26–35 buyers.

- AC: The reference sheet covers range, home charging, public charging access, and running-cost comparison versus petrol/diesel.
- AC: The script is accessible on the same tablet/device used at the point of sale.
- AC: Advisors can mark whether the EV script was used during a given customer interaction, for later effectiveness tracking.

US-5 — As a Customer Experience Team

I want buyers to confirm receipt of financing guidance appropriate to their age group, so that older buyers aren't defaulted into digital-only payment flows they may not prefer.

- AC: The system suggests a default financing pathway based on buyer age, but allows the buyer to choose any available option.
- AC: Confirmation of the chosen pathway is logged against the sale record.
- AC: A buyer can request assisted/branch support at any point in the financing step.

US-6 — As a Regional Service Head

I want a quarterly summary comparing complaint volumes before and after each dealer's quality review, so that I can measure whether the review actually reduced the targeted complaint theme.

- AC: The summary shows the targeted complaint theme's volume for the quarter before and after the review.
- AC: A reduction of the targeted theme is visually distinguished from an increase.

- AC: The summary can be generated for any single dealer or for all three combined.

7. Limitations

- Convenience sample of 135 respondents from one city (Hyderabad) at one point in time – findings are directional, not conclusive.
- Dealer-level patterns (complaint theme, service-info gap, choice reason) show no overlap between dealers, which is unusually clean for survey data and may partly reflect how the survey was fielded rather than true quality differences – treat dealer comparisons as indicative.
- Segments under 30 respondents (e.g. the 55+ age group, n=16) should be treated as indicative rather than statistically robust.
- KPI targets in Section 3 are proposed starting points for discussion with the Regional Service Head, not confirmed company targets.
